The workshop is divided into four major areas of tracks—Planning, Process, Application/Delivery, and Data/Information Management. Here's an idea of some of the topics we are looking at:

---

**Relevant Topics**

- Constructive, solution-oriented atmosphere
- Tom Hail Sessions: Providing all participants a chance to say what is on their mind in a comfortable, safe environment
- Experiences, raise concerns, and provide solutions for the issue at hand
- Synergistically present information in a panel setting when challenges to participants to share
- Concurrent sessions: Digging deeper into specialized subjects, concurrent sessions will offer opportunities for exploring important cross-cutting issues
- Proposal sessions: Designed to develop the common bonds between various committees and professionals in the following ways:

  - The event is being designed to be highly interactive so transportation, environmental, and planning professionals can engage in constructive dialogue on pressing issues. Program structure will engage

---

**Interactive Approach**

This promises to be a very engaging and enlightening event. Transportation and the environment are appropriating the planning and anticipated to attend. In the absence of industry, the MTD Standing Committee on the Environment, and the Center for Transportation and the Environment, and the Center for Environmental and Planning professionals in the world. Numerous TB committees, members addressing some of the most pressing problems of our time. Numerous TB committees, members are working to develop a common sense of perspective in this unique environment. Environmental and Planning professionals for real, open discussion among all committees and other key federal agencies. The opportunity to come together is one for only the second time in the history of the environment and energy section have the section

---

**Unique Opportunity**

Better Delivery of Better Transportation Solutions
Location
This event will be held in North Carolina and very likely in either the Raleigh-Durham or Charlotte areas.

Time and Date
The workshop is planned for the late spring or early summer of 2010. Workshop planners are targeting the June to July timeframe but avoid the Independence Day holiday.

Participating Groups
Numerous entities are helping with the planning and preparation of the workshop. These entities include representatives from most of the eight committees in the TRB Environment and Energy Section, the Center of Transportation and the Environment, and AASHTO Standing Committee on the Environment.

The event host is the Center for Transportation and the Environment (CTE).
Transportation agencies and their stakeholders frequently turn to the Center for Transportation and the Environment (CTE) for quality research, training, and information exchange related to improving transportation infrastructure while preserving the integrity of the natural and built environment.

Since its establishment in 1991, CTE has helped decision-makers and practitioners of diverse interests collaborate successfully on some of the most challenging technical and policy issues facing the profession.

Within the academic community, CTE has developed new opportunities for research among multi-disciplinary teams of faculty and graduate students, and has helped to cultivate the next generation of transportation and environmental professionals.
